

### SUDHAUS Innovation

Two number wheels inside of the red cap, allow next to the established key opening, the keyless opening of the dust-bin lid. The user can set up an individuell code, to protect the dust-bin from unauthorised other persons.

The intelligent **dust-bin lock** from **SUDHAUS** protects different containers from unauthorised access.

The dust-bin lock helps users and disposal companies. Only your own rubbish fills the dust-bin, the dust-bin lock opens automatically when the container is being emptied into the garbage truck.

Afterwards the dust-bin lock closes again automatically.

### Dust-bin lock

- opens automatically
- no rubbish from foreigners
- protection of private rubbish
- cost reduction
- protection from vandalism
- IP 40 protection

**The original**

The dust-bin lock provides benefits for:

**Users:** Protection against unauthorised access and the possibility of saving costs.

**Removal contractor:** Emptying without problem due to automatic opening on the garbage truck. Improved customer service and better efficiency.

**Communities:** Developing public awareness of environmental politics. Less effort for street cleaning (no rubbish on the street after e.g. storms or vandalism)

### With key

The locking cylinder is designed to operate with up to 200 different closures. The system is designed for using with a master key. The removal contractor can open all dustbins for control.

### ASSEMBLY WITHOUT PROBLEMS

Adjust drilling jigs, drill the holes, set lock and attach screws – DONE!

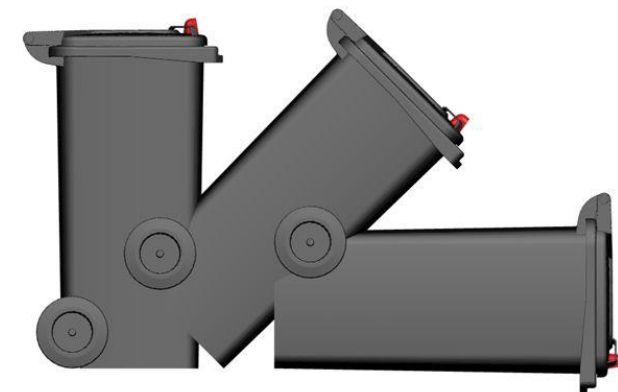

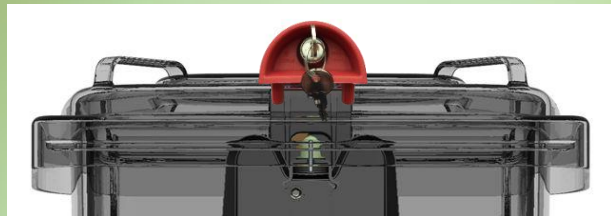

The user gets complete and clear instructions with delivery of the lock.

### Easy emptying

The dust-bin lock opens automatically on the garbage truck. After the dust-bin is set down, the lock closes automatically.

### Assured safety

If the dust-bin falls over e.g. in a storm or from vandalism, the lock remains closed.

SUDHAUS locks can be used to a maximum weight of:  
Volume of the dust-bin (due to manufacture) x 0.4.

Quality from tradition
